Name: Alex Ojemann
Partner: Portia Bhattacharjee

My activity: Cooking and eating an egg sandwich.
Portia's activity: Preparing and executing a volleyball set.

Notes for Portia's activity:
Face towards target, have where ball is coming from in peripheral
Fingertips below ball
Hinge at knees, not waist
Make a window with hands, palms facing away from you thumbs at a 45 degree angle about a foot away from eyes
Cup ball in hands and push it away don't let it touch your palms

Task model diagram for Portia's activity:

(I didn't see that we were supposed to get a picture of the other task model diagram until after class ended, but you can find the task model diagram for my activity in Portia's assignment submission.)

Pseudocode:

```
def setVolleyball():
        Face target
        while(ball is above waist):
                Wait for ball to come down to waist
        if(fingertips not where ball will be)
                Position fingertips where ball will be
        Hinge at knees
        if(hinged at waist)
                Unhinge at waist
        Make window with index fingers and thumbs
        Cup ball in hands
        Try:
                Release ball
        Except ball in palms:
                Let ball sink to index fingers and thumbs before releasing
```
